CareLink

Care for your parents, even from far away

Product prototype: the screens of the first version as they stand today.

Build of 11 October 2026

THE PRODUCT

Overview

CareLink is a family health-care app for adult children who live far from their ageing parents, whether in another Indian city or abroad. It replaces the phone calls, WhatsApp chats and paper folders families use today to know whether a parent has taken their medicines, is feeling well, or has an appointment coming up. The key decision behind it is that the parent never installs anything or creates an account. The child uses CareLink on their phone, in English or Hindi. The parent only gets short, respectful WhatsApp messages in their own language: a medicine reminder with a one-tap Taken button, a daily 'are you okay?' check-in, and appointment reminders. Everything runs on the parent's own clock and time zone.

What the child can do

- Add one or more parents, with their medicines, doses, times, food instructions and stock.
- See Today at a glance: taken, missed and coming doses, and the daily check-in, in ten display styles.
- Get alerts for a missed dose, a check-in with no reply, a 'call me' request, low or empty stock; also on WhatsApp.
- Keep doctor visits with automatic WhatsApp reminders to the parent.
- Invite brothers, sisters and relatives to share the same parent.
- Share a login-free emergency link or QR code with blood group, allergies, medicines and contacts.
- Report reading with AI is built but switched off for version 1.

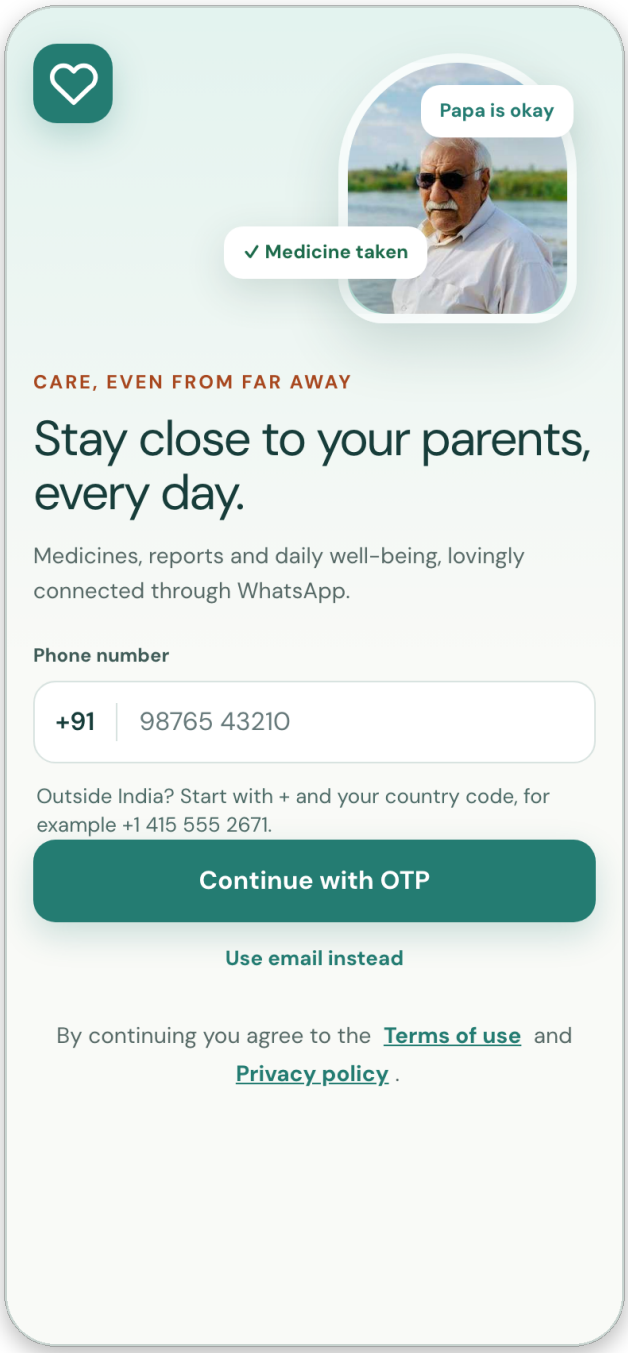

What the parent gets (WhatsApp only)

- A reminder with a medicine photo and a Taken button, in their language.
- A short good-morning check-in with one tap to say 'I am okay' or 'Call me'.
- A gentle reminder before a doctor visit. They can reply STOP at any time.

Built with care

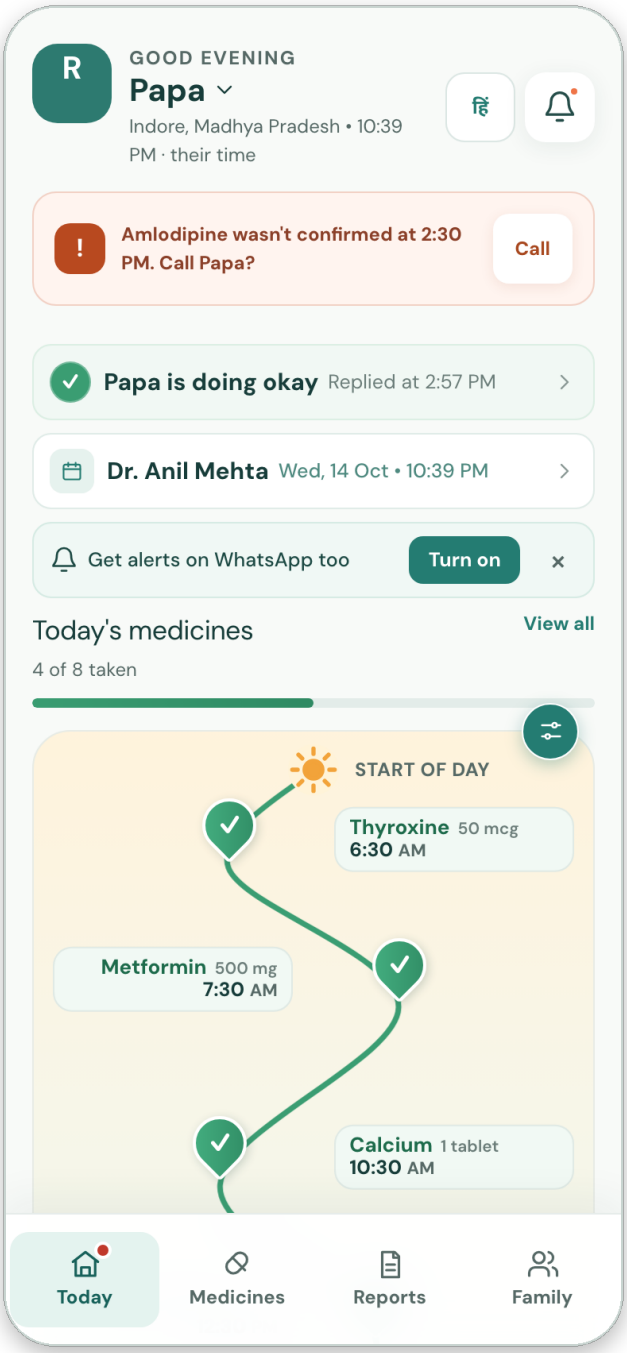

- Every family's data is kept apart by database rules; files are private.
- The parent must agree before any message is sent. Short privacy and terms pages, data download and account deletion are included.
- 226 automated API tests and 129 database tests pass, after a six-agent break-the-app round.

Welcome and Today

Welcome

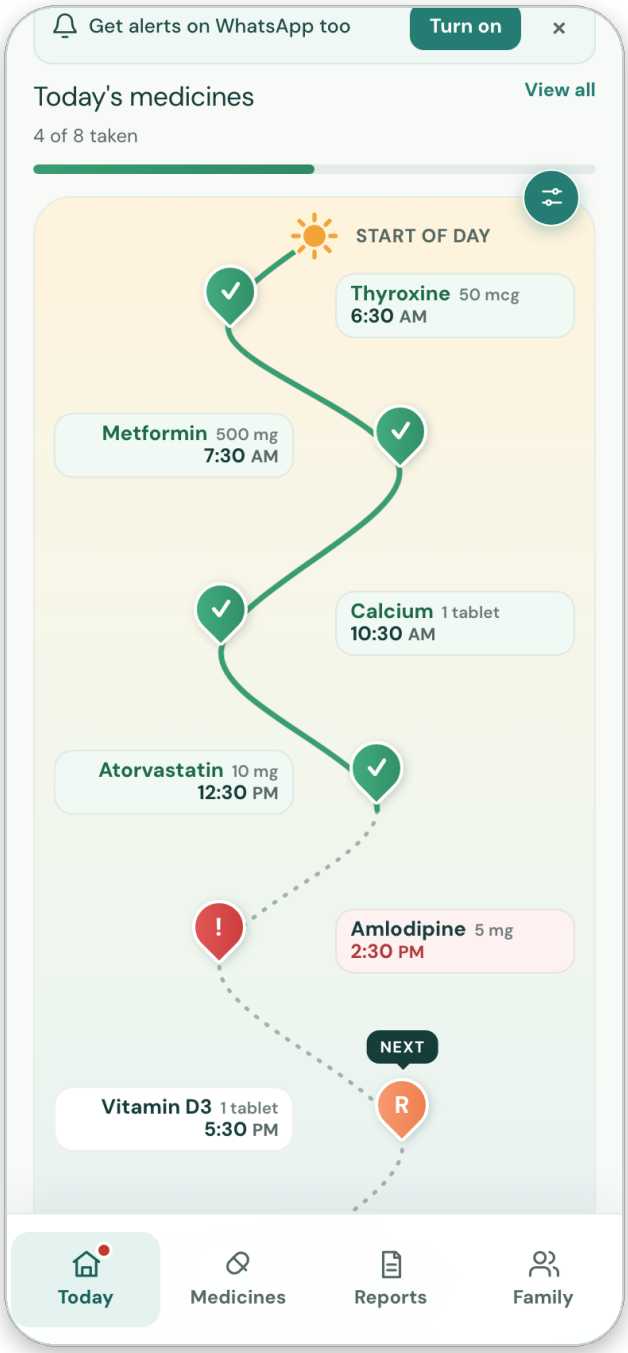

Phone or email sign-in with a one-time code, in English or Hindi.

Today

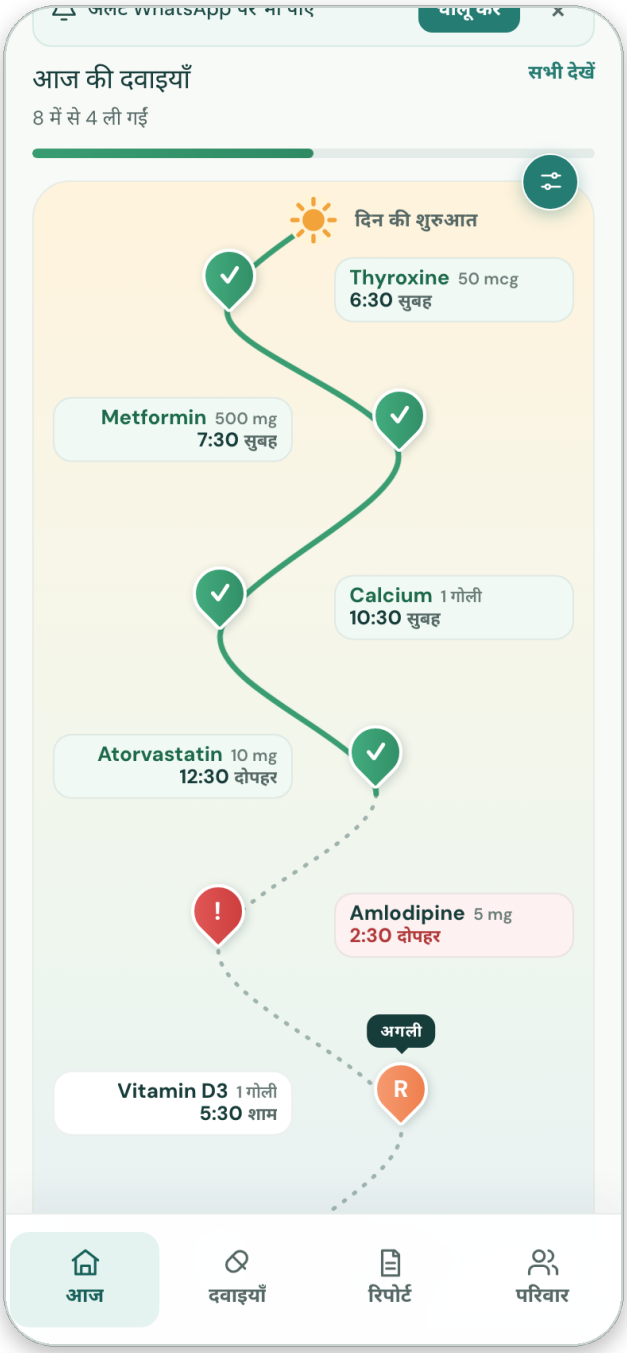

A missed-dose alert first, then the daily check-in, the next doctor visit and today's medicines.

Today's medicines as a route

The route

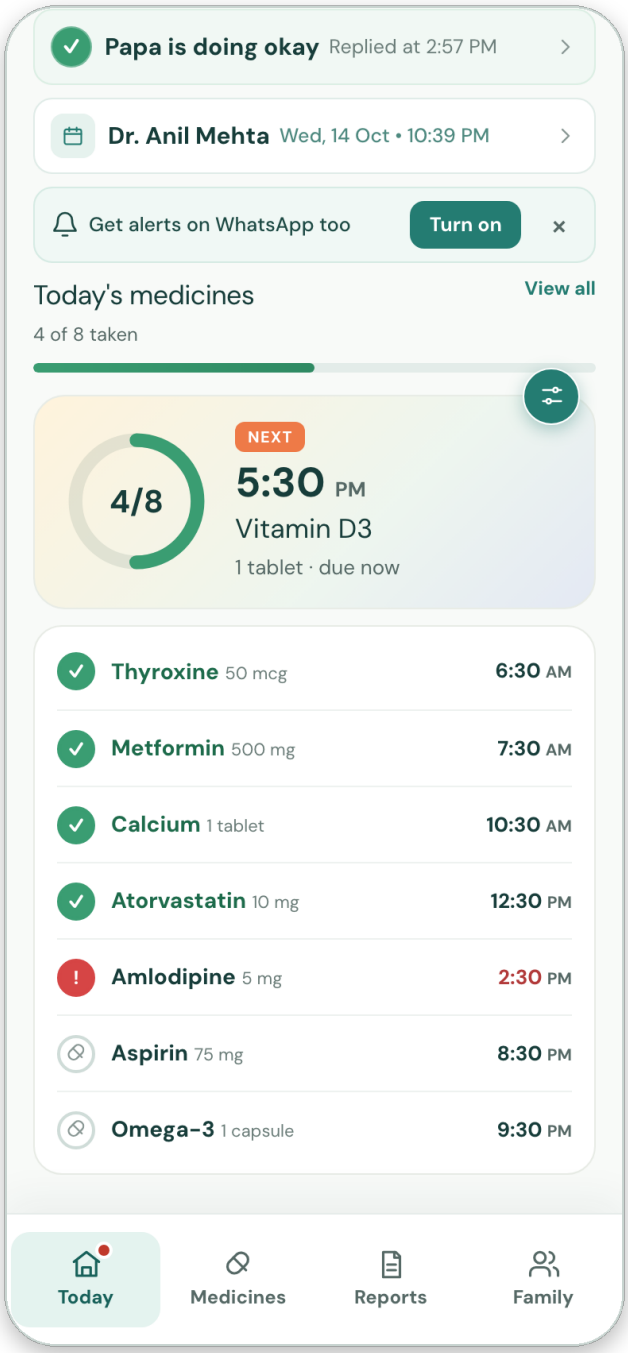

Taken doses turn the road green. The next dose is marked NEXT with the parent's initial.

The same screen in Hindi

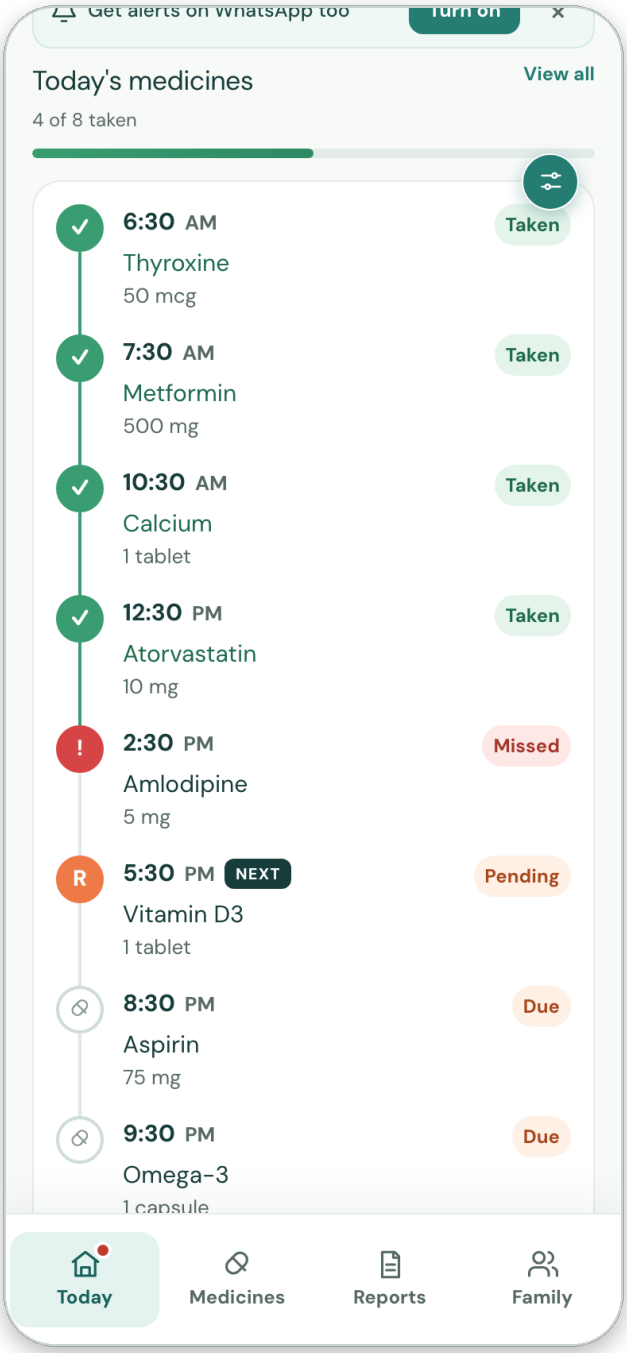

Every screen works in English and Hindi, with natural wording.

Choose how Today looks (1)

Style: Focus

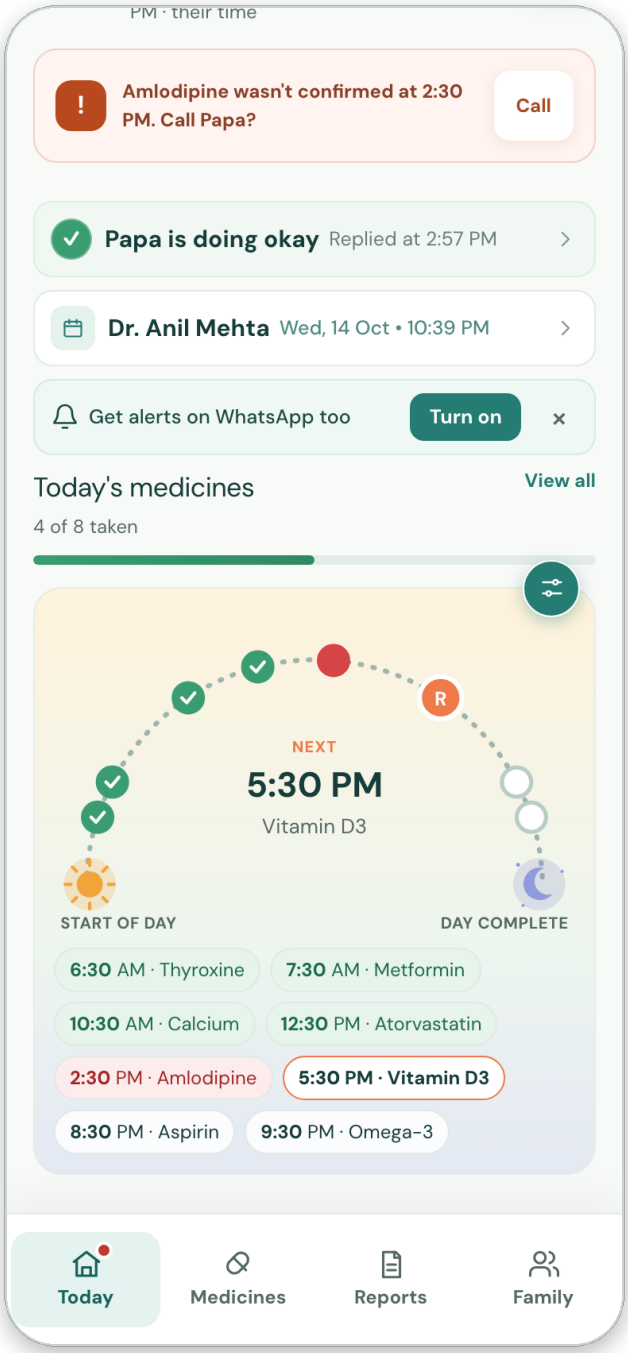

A progress ring, one big card for the next dose and a short list.

Style: Timeline

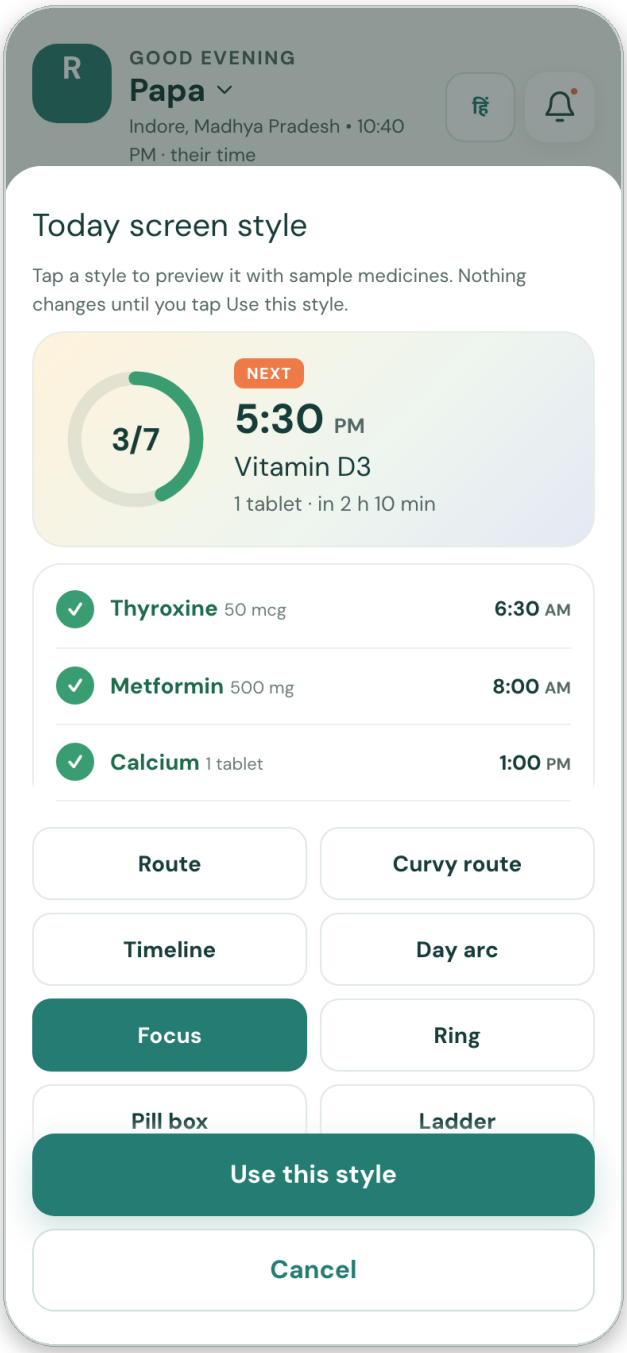

A simple line with one row for each dose.

Choose how Today looks (2)

Style: Day arc

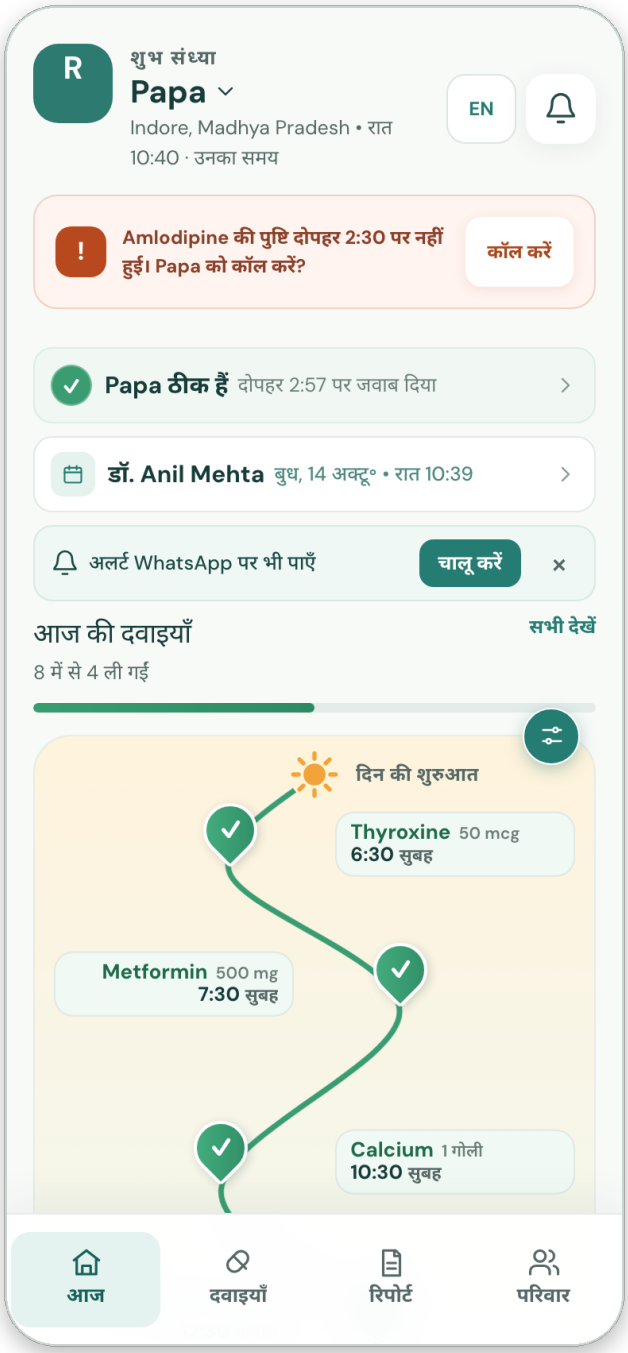

Sunrise to sunset on one arc, with each dose as a dot.

The style picker

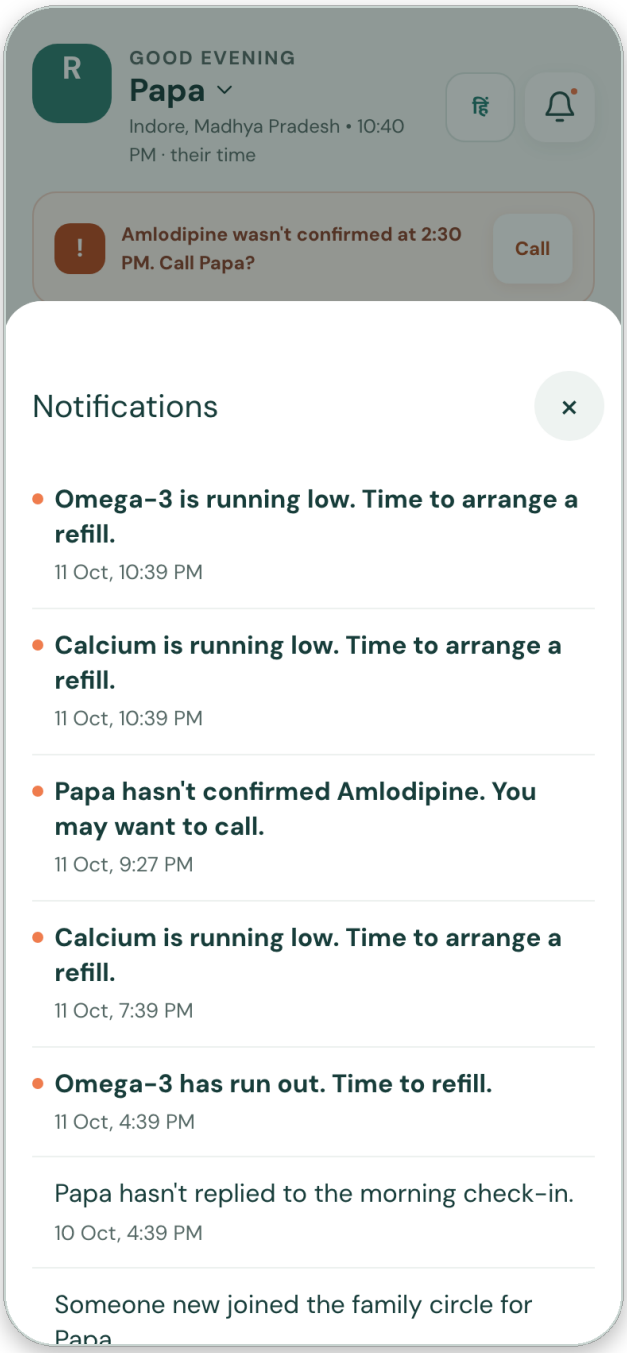

Try ten styles with sample medicines, then save the one you like. It is saved to your account.

Hindi and alerts

Today in Hindi

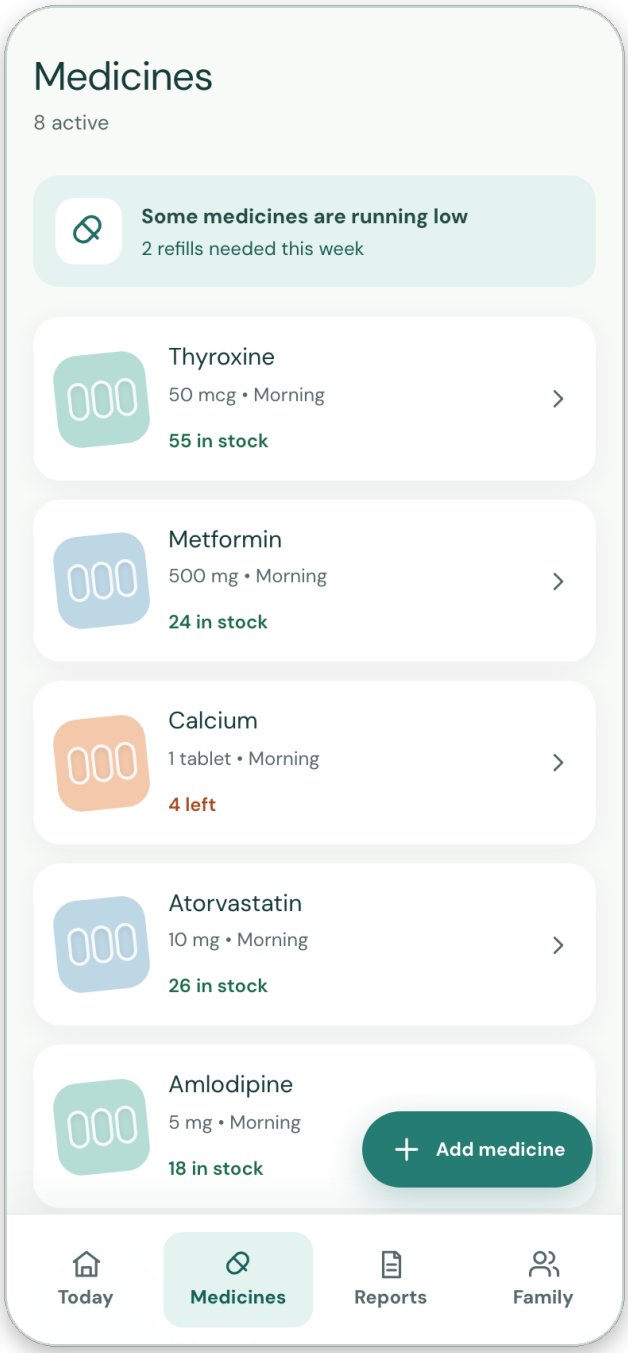

Reminders, status and buttons are all translated.

Alerts

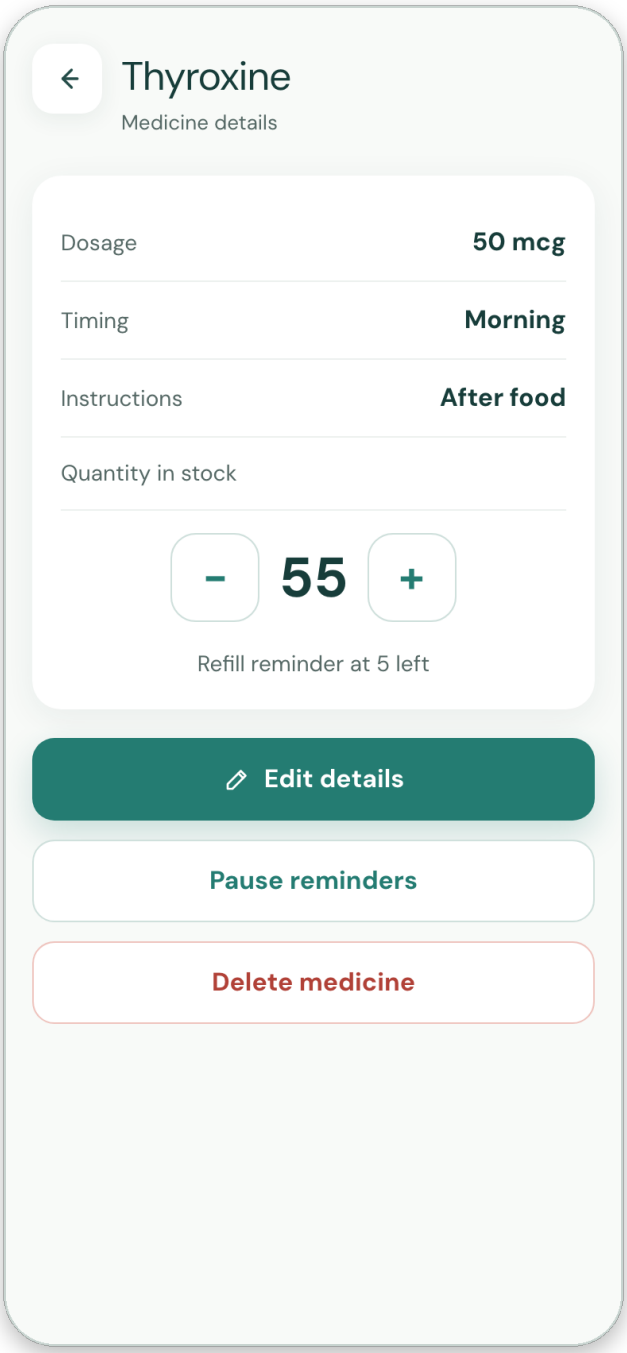

Missed doses, low stock, missed check-ins and new family members. Swipe a row to delete.

Medicines

Medicine list

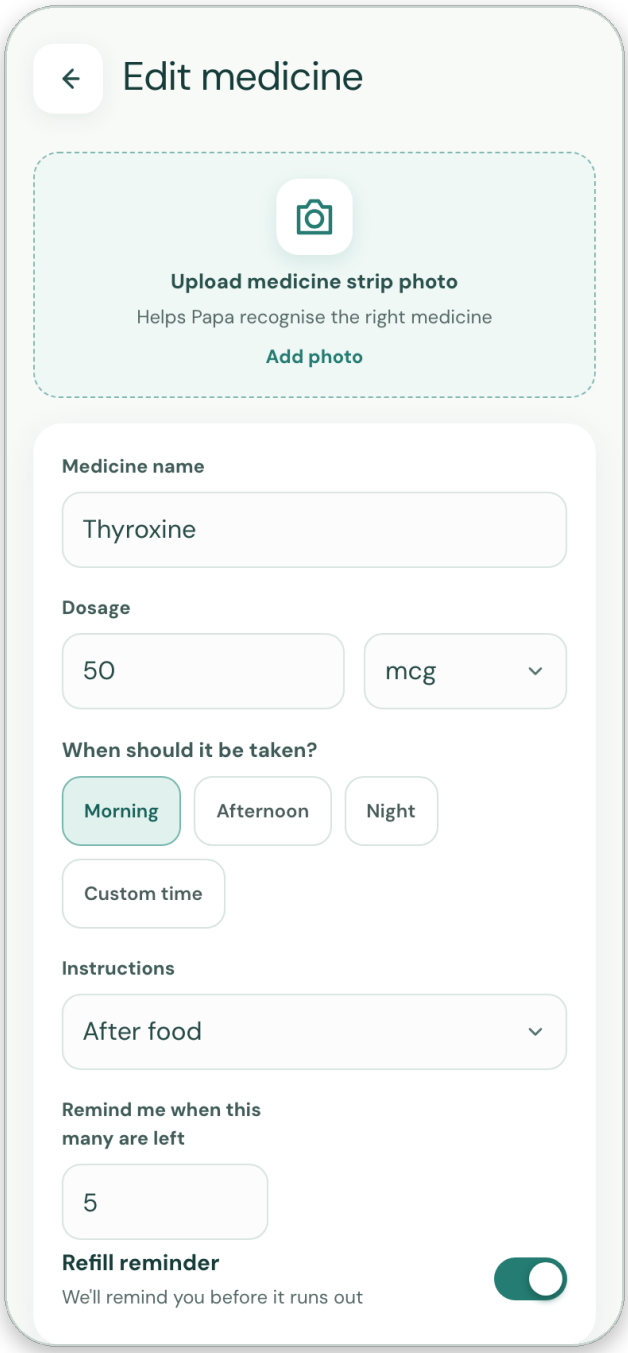

Stock levels with warnings when a medicine runs low.

Medicine details

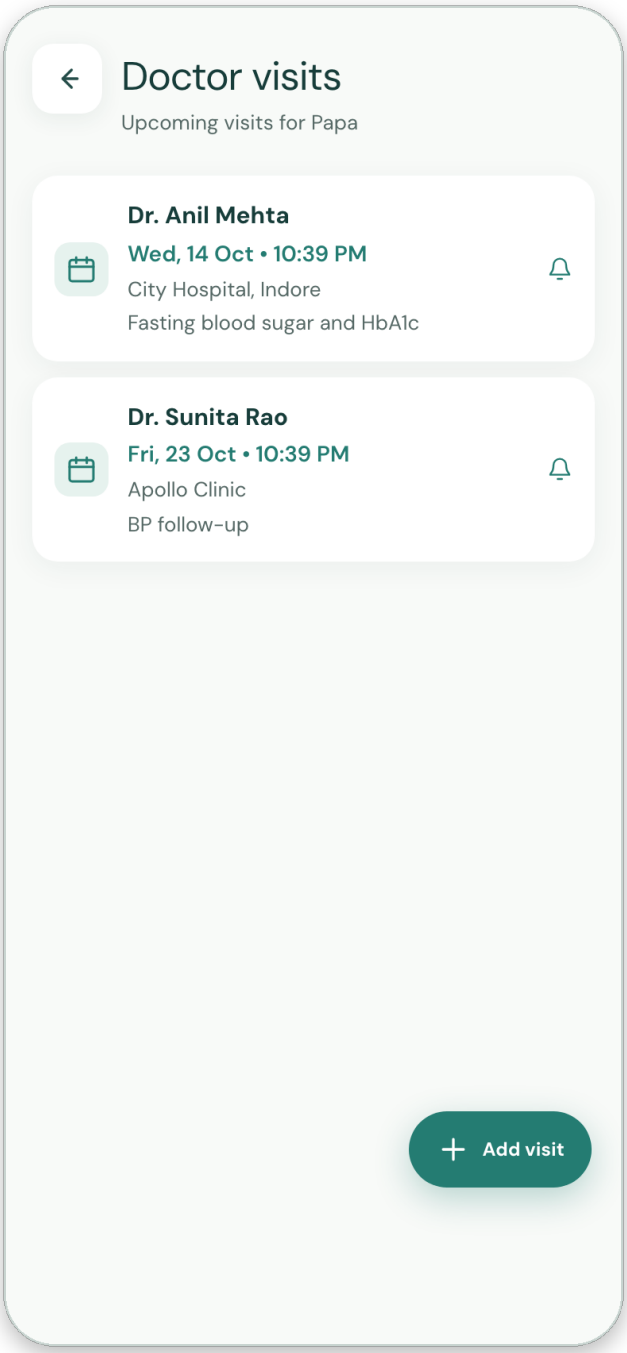

Dose, times, food instructions, a stock counter, pause and delete.

Editing and visits

Edit a medicine

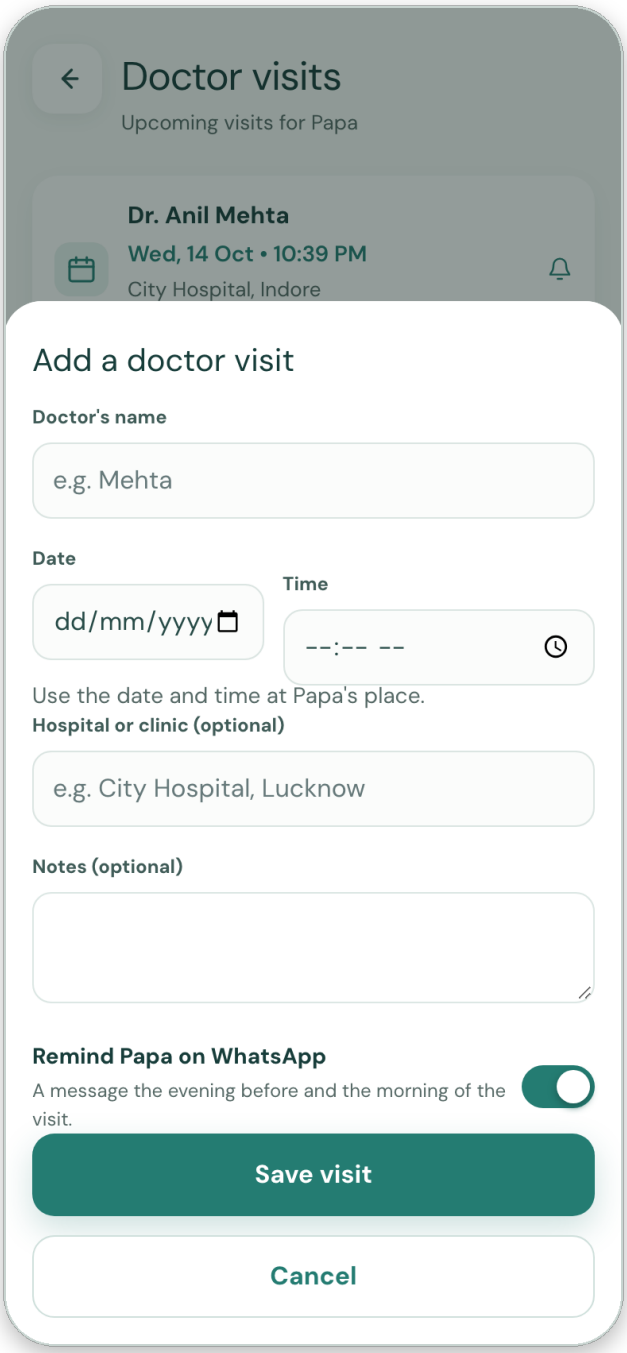

Change the dose, times, instructions, photo and refill level.

Doctor visits

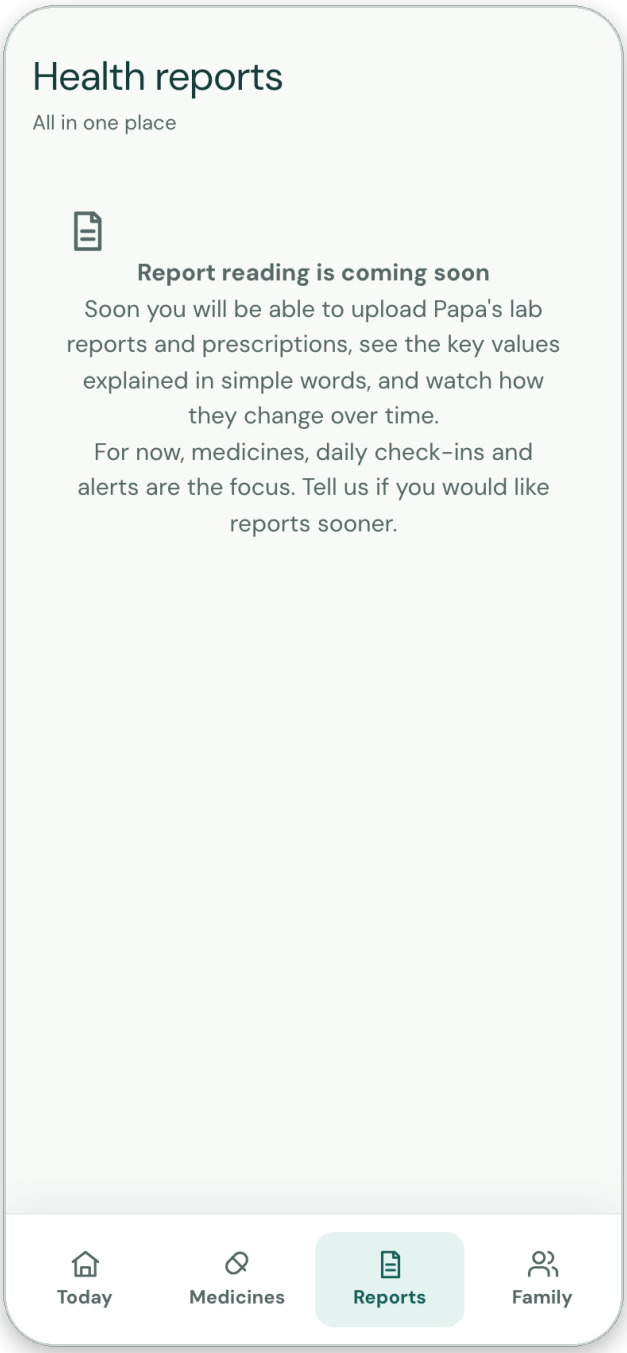

Upcoming visits. Papa gets WhatsApp reminders the evening before and that morning.

Add a visit and reports

Add a doctor visit

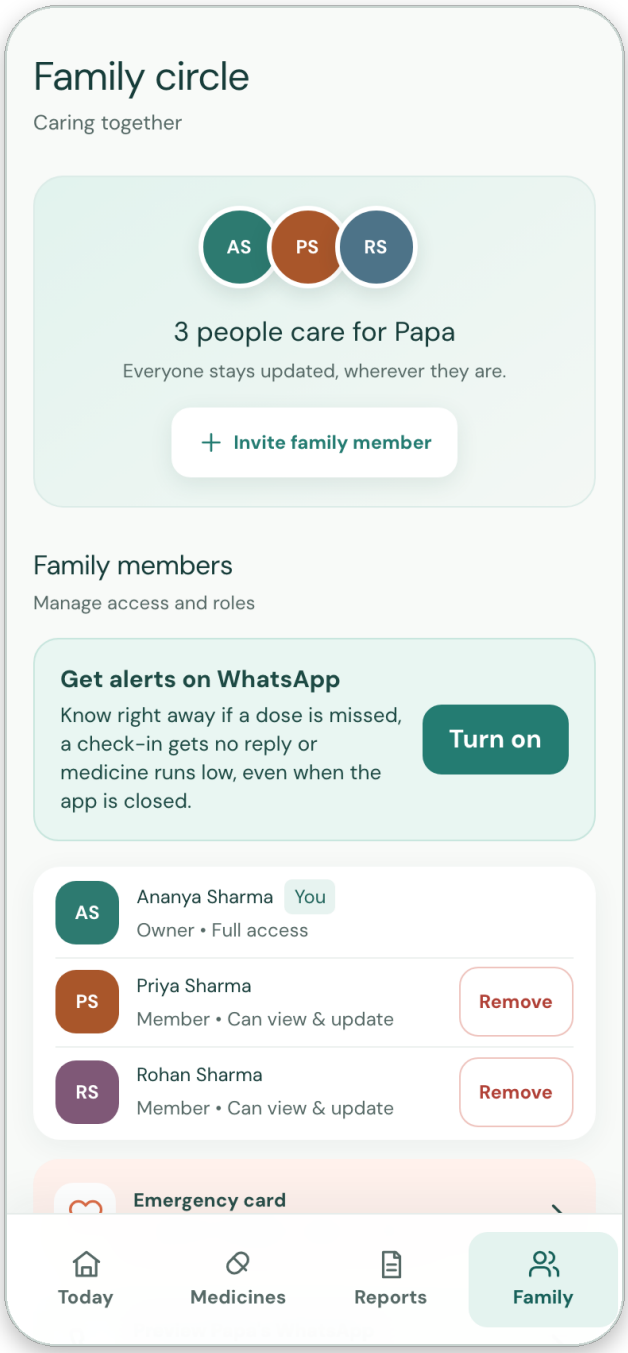

Date and time are at the parent's place. Reminders can be switched on or off.

Reports

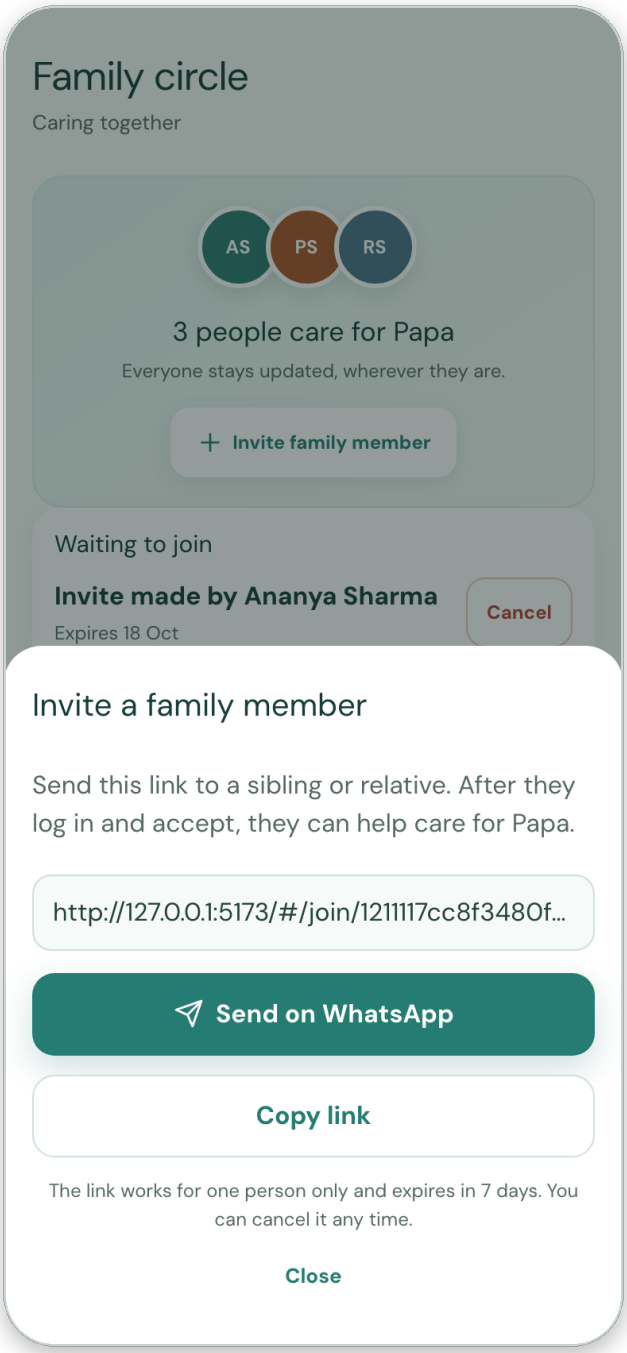

AI reading of lab reports is built and switched off for the first version.

Family circle

Family circle

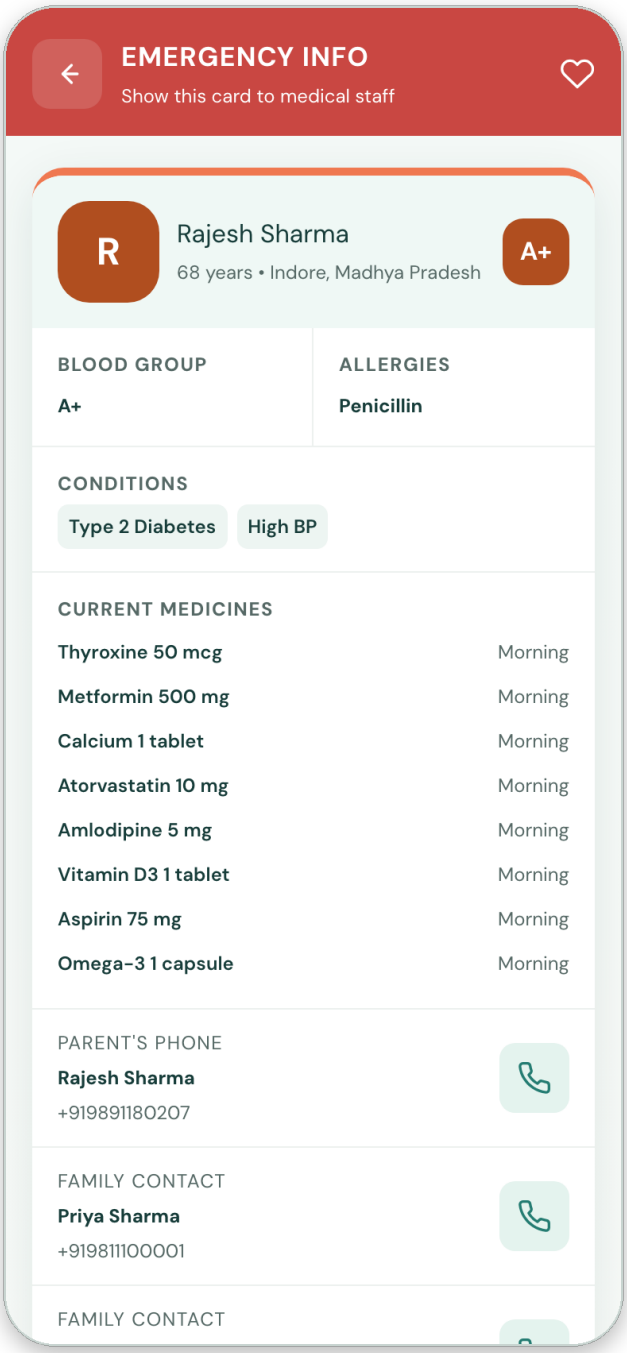

See who looks after Papa, pending invites and the WhatsApp alerts option.

Invite a family member

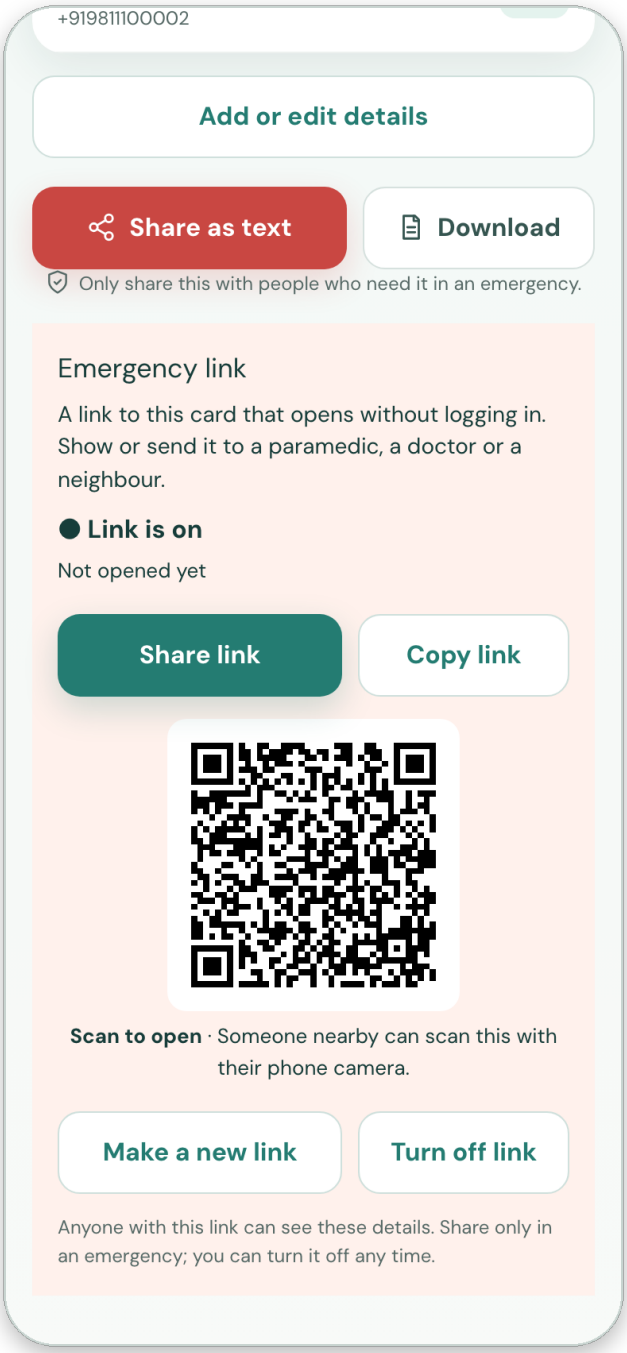

A single-use link that expires in 7 days. Send it on WhatsApp or copy it.

Emergency card

Emergency card

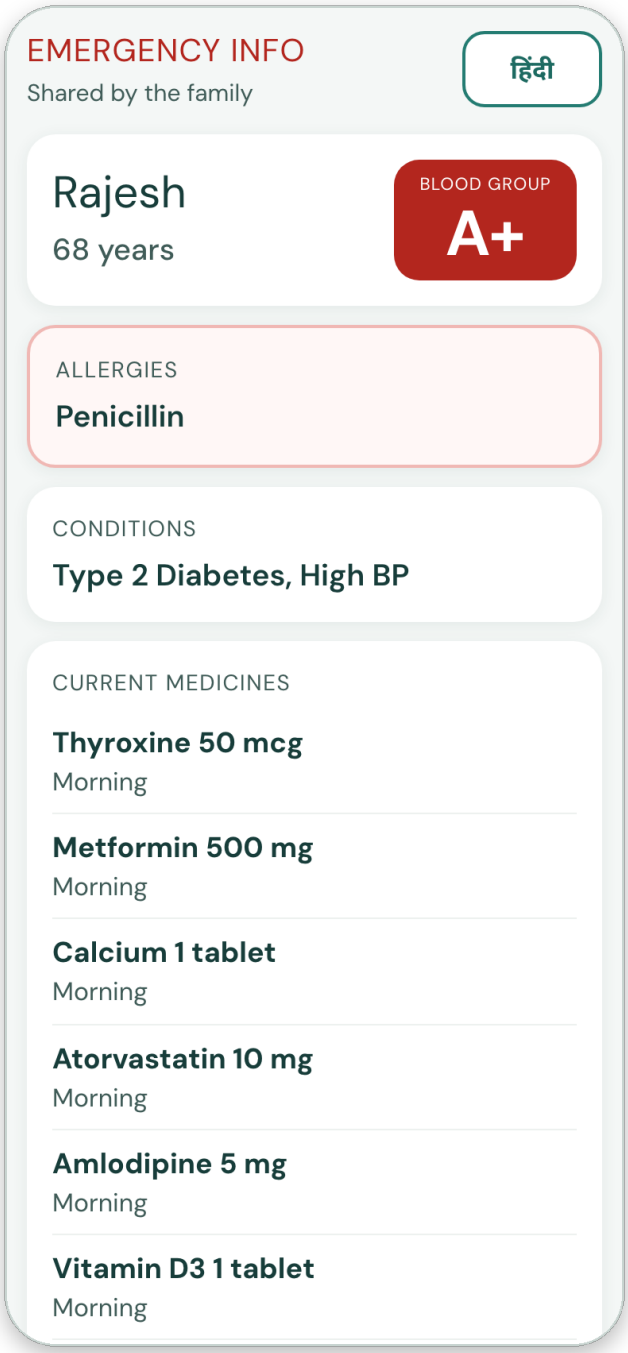

Blood group, allergies, conditions, current medicines and contacts.

Emergency link and QR

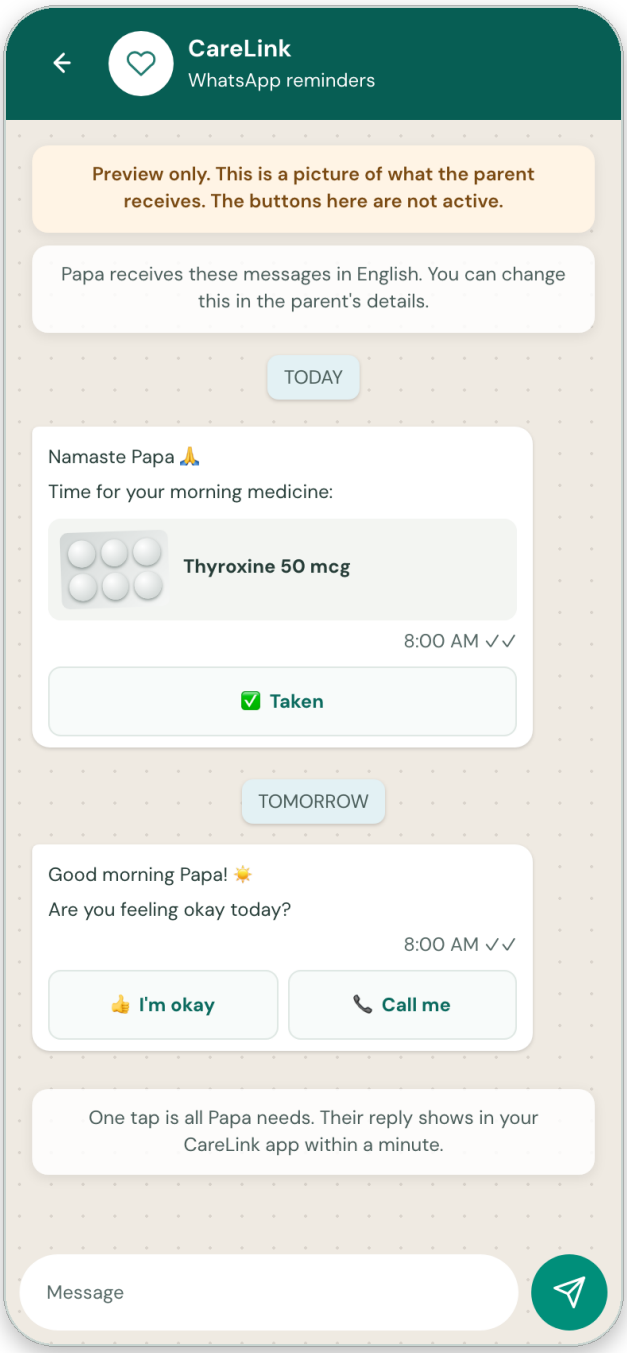

Share a login-free link or QR code. Turn it off or make a new link any time.

What others see

The public emergency page

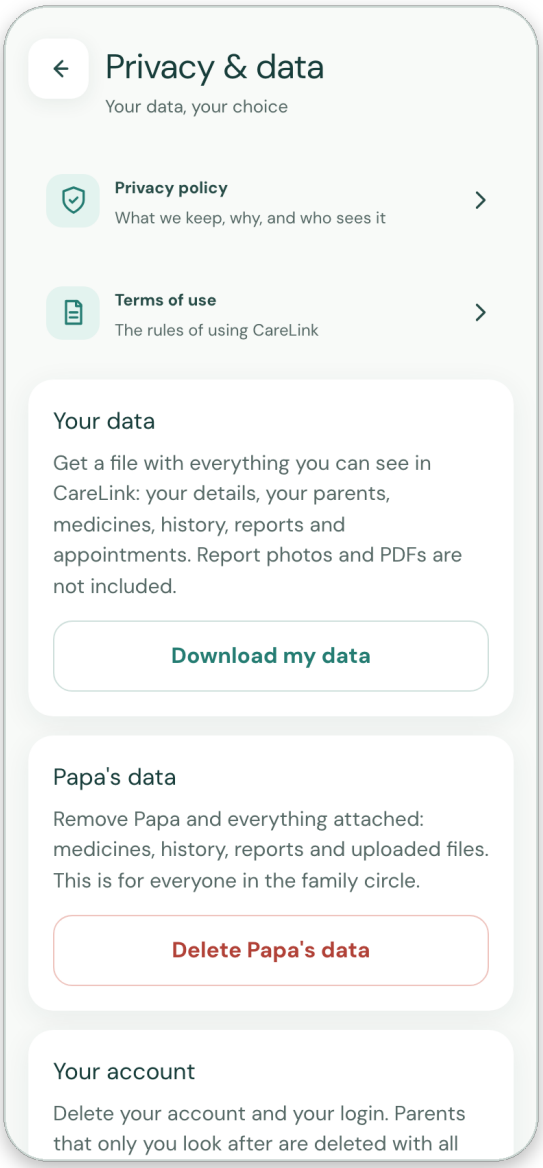

Opens with no login for a paramedic, with large text and tap-to-call numbers.

What the parent sees

A preview of the WhatsApp messages: a reminder with a Taken button and a daily check-in.

Privacy, status and next steps

Privacy and data

Download all your data or delete your account. Short privacy and terms pages in plain words.

Where we are

- Version 1 is built and tested end to end, running on a local test setup.
- Reminders, check-ins, alerts, appointments, family invites, the emergency link and privacy are working.
- WhatsApp runs in test mode until a Meta account is connected.

Next steps

- Create the Meta WhatsApp Business account and get the message templates approved.
- Put the app on a secure web address and host the server.
- Choose the final product name and domain.
- Pilot with 20 to 30 families you know.
- Later: report reading with AI, quiet hours, payments.

How we will know it works

- Share of medicine reminders the parent confirms.
- Caregivers who use it every week.
- Families still active after four weeks.
- Families willing to pay.

These screens use made-up sample data (a parent named Rajesh Sharma). No real person's information is shown.
